[« Previous](#) [Next »](#) Showing 1 to 10 of 11 results [<](#) [1](#) [2](#) [>](#)

Title bar

- Home
- En: Translate to English
- Ar: Translate to Arabic
- Dashboard: it appears in case of admin (email: 'admin@admin.com' and password 'password'.), but for any other users It will be hidden.
- Logout: to logout from the current account

Content Table

Contains all the employees stored in the SQL database.

The table is displayed with pagination (10 records pr page)

Dashboard

Home

Employee						
Add company						
#	Name	Email	Website	Logo	Edit	Delete
1	ATW	contact@atw.ltd	Go to website		Edit	Delete
2	Valeo	support@valeo.com	Go to website		Edit	Delete
3	Raitotec	info@raitotec.com	Go to website		Edit	Delete

It consists of 3 headers (Home, Company, and Employee) , “Add” button and a table of content.

- Home: it returns the admin to the main page
- Company: it shows all the companies recorded in the database.
- Employees: When it’s pressed, it shows all the employees recorded in the database

Company Section

If Company header is selected then, “Add Company” button will appear, and a table of Companies will be displayed from the database.

Add Company

Home	
Company	
Employee	
Name	<input type="text"/>
Email	<input type="text"/>
Website	<input type="text"/>
Logo	<div>Choose File No file chosen</div> <div>save back</div>

The admin should enter the company’s Name, Email, website, and logo.

A validation check is handled to have a valid unique email address, and the logo should be JPG or PNG and It’s displayed as (100 x 100).

Data is stored in the database to be retrieved on rendering the companies table.

Companies Table

10	lara	essam	lara@gmail.com	01007643258	Valeo	Edit	Delete

Add Employee

The admin should enter the employee’s First Name, Last name, Email, phone, and choose a company from a drop down list.

A validation check is handled to have a valid unique email address, and the phone should be 11 numbers.

Data is stored in the database to be retrieved on rendering the employees table.

A relation exists between employee table and company table as company id is a foreign key in the employee table.
